```
Question 1 | Correct Mark 1.00 out of 1.00
```

Assume you are an awesome parent and want to give your children some cookies. But, you should give each child at most one cookie.

Each child i has a greed factor g[i], which is the minimum size of a cookie that the child will be content with; and each cookie j has a size s[j]. If s[j] >= g[i], we can assign the cookie j to the child i, and the child i will be content. Your goal is to maximize the number of your content children and output the maximum number.

Example 1:

Input:

3

123

2

1 1

Output:

1

Explanation: You have 3 children and 2 cookies. The greed factors of 3 children are 1, 2, 3.

And even though you have 2 cookies, since their size is both 1, you could only make the child whose greed factor is 1 content.

You need to output 1.

Constraints:

```
1 <= g.length <= 3 * 10^4
0 <= s.length <= 3 * 10^4
1 <= g[i], s[j] <= 2^31 - 1
```

Answer: (penalty regime: 0 %)

```
#include<stdio.h>
     int main(){
 2
         int n,m,count=0;
 3
 4
         scanf("%d",&n);
 5
         int arr[n];
 6 ,
         for(int i=0;i<n;i++){</pre>
 7
              scanf("%d",&arr[i]);
 8
         }
 9
         scanf("%d",&m);
10
         int brr[m];
11 ,
         for(int i=0;i<m;i++){</pre>
              scanf("%d",&brr[i]);
12
13
14
         for(int i=0;i<n;i++){</pre>
              if(arr[i]<=brr[i]){</pre>
15
16
                  count++;
17
18
         printf("%d",count);
19
20
```
